SEED DEPARTMENT GUARANTEE

For the 13 years we have carried on our Seed Department it has been our high aim to make this Department build itself on its reputation. Promptness is one of the first essentials. In a few cases we were a little slow last season. We can assure you with more and better help, more room, which we lacked before, we will be in a position to put each order out as fast as it is received.

We Guarantee to Give you nothing but Fresh, Tested, Sure to Grow, Strictly True to Type Seeds. We give you the exact Weight Purchased. All Flower and Garden Seeds come to you postpaid, thus saving you time and trouble. In fact this Department Guarantees you a Square Deal in every way and manner.

We give a Prize Package with every order of seeds.

TREES BY MAIL POSTPAID

For 15 years we have been mailing out trees by Mail Postpaid. They have given satisfaction. These trees are 3 to 4 feet tall, straight, well rooted stock. We are sending out, annually, about 2000 customers' orders in this way. There is no order too large to ship by Parcel Post, as we can make several bundles, if necessary. Do not order the larger sized trees by mail as they are too long for mailing.

They come postpaid to your door thus saving transportation, insuring speedy delivery, and we GUARANTEE their safe arrival.

Prices of these trees by mail are as follows: Apple at 25c each; Peach at 20c each; Plum, Pear, Cherry and Quince at 40c each.

We have taken special pains in selecting our Peach and Apple for this trade and we will say these are as nice trees as can be purchased anywhere. These trees are just the thing for your home Fruit Garden and we know they will please you.

MONEY IN FRUIT

Some Planters have been worried for several years, afraid that too many trees were being planted. This is a wrong idea. Fewer trees are being planted than there were in 1912, while we have a much larger population, a steady city expansion, that calls for larger quantities of fruits all the time. Fruit cannot be over done. The men today who have bearing Peach and Apple Orchards are reaping the greatest profits of any form of Agriculture. Grape growers got \$90 per ton this season for

their grapes, many of them realizing \$300 per acre. Even if grapes do go as low as \$50 per ton there is no crop which even opens the meeting with them. Apples sold this season, quickly, at \$6.00 per barrel for No. 1 grade; Peaches at \$2.50 per bushel; Pears at \$2.50 per bushel; Plums at \$1.50 per bushel; Raspberries, Strawberries, Blackberries, Currants and Gooseberries sold equally as well.

Don't let the howler of hard times scare you off from planting, as fruit prices have come to stay and fruit is a money maker for the man who will care for it.

"Special Notice—Please Read"**1925 TREE DEPARTMENT**

For 31 years we have worked industriously to build up a business in Fruits, Trees and Plants with prices from Grower direct to Planter. Always through bad years and good financial years we have tried to give our Customers a Golden Rule treatment.

This year instead of dropping our price we have given orders that the grade of every Plant and Tree shall be advanced in Quality both as to shape and roots. In other words those of you who order from us will get the best trees you have ever purchased of us.

Our main fault in past years has been our slowness in getting our tree orders shipped. This was due to the fact that we were not equipped with packing sheds to handle stock in rainy and freezing weather. We have this season built and equipped a 60-ft. by 80-ft. packing shed. Nothing but fresh dug trees will be placed in this shed, which will eliminate all chance of any drying out from digging to shipping. Our trees are grown on our farms here near Lake Erie, making them hardy, productive trees.

We Guarantee them true to name as they are budded and grafted under the supervision of our partner and expert Chas. A. Allen, who carefully sees that no mistakes occur.

Our catalog is priced low, but not so low but what the trees, whether you buy a 3-4 ft., 4-5 ft. or 5-6 ft. tree, will all be well rooted, straight reliable stock.

In fact with our present Organization and our New Packing Sheds there will be none of the troubles that some times face the customer and tree man to iron out. We trust to have your business.

To overcome this we are aiming to bring each variety to a perfect standard as our other "GUARANTEED SEEDS" and to those who have never used our seeds, we can only ask a trial on our celery seeds and let your future seed orders be governed by the results.

Giant Pascal—One of the best on the market. It produces perfect branched stalks, 2 ft. long, crisp and thick, blanches early and easily, fine keeper and shipper.

Our strain is 99 per cent pure and is being used by leading greenhouse men.

Early Prizehead—This old standard variety is still the best of the large, thin-leaved, clustering sorts for the home garden, but is not a good kind to ship a long distance as the leaves are so tender they are easily spoiled in handling. Kleckley Sweet—A big melon, rank grower and simply covers the ground with fruit of fine market quality. It does well in northern climate and cannot be beaten for the medium crop.

King and Queen Watermelon—A winter keeping watermelon originating in Volga Valley, in Russia, will keep until February, keeping its color and flavor. We think this worthy of a trial as it comes highly recommended by the largest growers of melons in the United States. $\frac{1}{2}$ oz. 10c, 1 oz. 15c, $\frac{1}{4}$ lb. 40c.

Alabama Sweet—The best long melon grown; fine for shipment, large, of oblong form, flesh bright red and delicious flavor, seeds are white.

Cole's Early—Best home variety and nearby market, early and hardy, very sweet, red rind slightly striped.

Halbert Honey—Another good home variety, with a dark green skin and crimson flesh, extra flavor, rather oblong, once tried it will always find a place in the garden.

Tom Watson—Although this variety matures early, it is the largest melon, 18 to 20 inches long and 10 to 12 inches thick and has a record of weighing from 40 to 50 pounds. A tough rind, making a good shipper. Its quality is as good as any melon grown. There is no mistake in "TOM WATSON."

Sweet Heart—A mottled variety, commanding the best market prices, a great favorite with local market gardeners and a good seller, excellent quality.

Fordhook Early—A good melon and ranks up with Cole's Early, only larger and better, long distance shipper.

Irish Grey—A grey colored melon of large size, a good shipper and keeper, extra good quality and highly recommended.

Iceberg—A favorite, oblong to nearly round, melons weigh from 30 to 50 pounds each, the rind, though thin, is tough and melons bear handling and shipping well. Flesh is bright red. A profitable market melon.

Ice Cream—White seeded fruit of medium size, nearly round, skin pale green, rind thin, flesh scarlet, solid, crisp, delicious.

Citron—Red seeded, for preserving only, high grade and the best.

Allen's Ohio Favorite—One of the biggest growers of melons in Ohio sent us 6 of these Melons in 1914, stating that we could save the seeds and try it on our land. We did and it produced more melons, better quality and ripened up better than any melon we have ever planted. We made a contract with the originator to introduce this melon. It is early, extra fine flavor, form rather long, color dark green, seeds dark, very productive, crisp and sweet. Try it.

OHIO GROWN FIELD CORN

By express or freight, bags free.

Allen's Sure Ripe—This corn is nothing particularly new, but has been grown for years

by some of the best farmers in Northern Ohio and this season has proved the good judgement of them to stick to this variety. No doubt you have seen a corn very similar. It has ears 8 to 10 inches, of a reddish tinge, medium sized cob, kernels quite long, quick starter, making extra fine fodder and gets ripe from 80 to 90 days from planting. The farmers who raise this kind are the ones in this section who have nice hard corn fit to crib. If you raise only what corn you feed yourself we believe this is the most profitable corn for most farmers. We procured all that was grown on two large farms in Northern Ohio, near Lake Erie. We believe this corn would have made good seed right from the field, but of course we have put it through the most improved system of drying seed corn.

Early Butler—A remarkable early corn of a reddish-yellow color, better than Pride of the North and matures in 75 to 80 days, with 7 to 8 foot stalks, small cob, deep kernels, matured the last five seasons in Northern Ohio in good shape.

Early Yellow Dent—A clear, early yellow corn, 80 days, ripens anywhere in an early frosty season, produces an immense crop of fine corn.

Write for prices on clover

Gold Mine—Longest kernels we ever had in this section, will produce far more pounds of corn to the bushel than any other corn grown, a beauty for color. A sample of this will impress you. Small cob, 100 to 110 days, stalks 8 to 10 feet.

National Champion—Another season only sends this corn to the head of the list as the best farmer's corn grown. The best reported yield this season was 137 9-10 bushels per acre. A winner of several prizes and still scarcely known outside of a few sections. We have had many highly flattering letters as to the result of last season's crops of National Champion. The stalks are large, dark green with many broad leaves. The roots are large and strong. The ears are 8 to 12 inches, nicely finished to the end with 12 rows of deep, broad kernels. Any wishing a new corn will make no mistake in National Champion. Send for sample.

Pride of the North—This corn is selling under almost any old name, but we claim our strain is as pure as the original seed and still is the earliest yellow seed corn obtainable. In some sections of our country where the early frost cut the corn crop short, our Pride of the North ripened a good crop, a beautiful yellow, of medium size, deep kernel, no more than 90 days and often 75 days, stalks 6 to 8 feet, 7 to 9 inch ears.

Early White Cap Yellow Dent—A strong grower, claimed to do well on thin soil, takes 100 days, produces an abundance of fodder, stalks 7 to 8 feet, ears 7 to 10 inches.

Improved Leaming—A big corn, grown to harvest an immense crop of large yellow corn with a good season. This is hard to beat, can be used for ensilage.

Improved Long Yellow Flint—Yellow, we believe this the best flint corn, extra long ear, ripens early, prices same as Pride of the North.

Reid's Yellow Dent—A great many farmers will not use anything else. Something like Leaming, but better and earlier, a large ear, deep kernel, 100 days.

SOUTHERN ENSILAGE CORN

Our Ensilage Corn this season matured very early on the Virginia Farms where it was grown for us under contract and we can assure you a good percentage of vitality.

Will be out of driers about February and advise placing orders at once, as same will be very scarce, as Southern farmers had no help to husk their corn before wet season there. Can quote special prices on large lots or carloads.

Improved Old Virginia—We quote this only. The demand in this section is for nothing else, it being superior to all others, much sweeter, earlier, better ears, a big milk maker, cattle eat it well when not put in silo. We advise trying this corn.

Per bushel, 56 lbs., \$3.00.

Eureka—This is a large stalk, claiming to contain more sugar than many, also considerable grain. Per bu. 56 lbs. \$3.00.

Cuban Giant—The largest of all, the seed is uniform, matures more tons to the acre than any other. Per bu., 56 lbs. \$3.00.

Red Cob—Personally we have always favored this corn because of its immense crop of ears. The ensilage looks full of nice grain. Per bu. 56 lbs. \$3.00.

Western Leaming—We can furnish a big strain for ensilage. Per bu., 56 lbs. \$3.00.

OATS

Miami Oats—A creation of the Ohio Experiment Station and recently given the above name. A large berry; stiff, upright grower; does not lodge badly, free from diseases, the heaviest yielder yet offered, for the Central States is especially adapted for Western Pennsylvania and State of Ohio. We produced 64 bushel to the acre here on our place this season and are offering these reclaimed. Samples sent on request, sacked free.

32 pounds \$1.25, 5 bushel \$5.00.

Swedish Select—A pedigreed variety introduced from Russia. Weighs from 38 to 40 pounds per measured bushel. The straw is coarse, noted for its stiffness and power to withstand lodging. The grains are pure white in color, large, thick and plump, making a very handsome appearance. The heads are upright, large and bushy, they are also nearly all meat, the hull being exceedingly thin, making them especially valuable as a feeding oat. Their great root development enables them to resist drought better than most kinds. They are quite early and are less liable to smut and rust than most any other sort.

Per peck, 8 lbs. 50c; per bu., 32 lbs. \$1.25.

SUDAN GRASS

This is a much talked of grass, is very highly spoken of, every farmer should try it. Allen's Northern Grown, postpaid, 1 oz. 10c, ¼ lb. 15c, 1 lb. 25c, 10 lbs. \$2.00, 50 lbs. \$8.00.

BROOM CORN

More money for you in this crop than any other. Think of it, brooms cost the housewife now from \$1.00 to \$1.50. What about starting a factory in your locality? Broom Corn will produce one ton per acre worth from \$100 to \$200 per acre and a great deal more than this if you will learn to make brooms. A small warm shed will do to make them in and give you an occupation for the winter months, when practically, you are earning nothing. Every neighborhood has some one who knows about making brooms. In the northern states the tall varieties do best. Broom corn will grow where corn grows and needs the same treatment. Plant later than field corn, 70 to 80 days will ripen the crop. The seed makes good feed. Plant in drills 3½ feet apart, 2 to 3 inches apart in row. 10 lbs. seeds are grown per acre.

Improved Evergreen—The leading variety, Western grown, standard Improved Evergreen. By mail, postpaid, 1 oz. 5c, ½ lb. 15c, 1 lb. 25c. By freight, 10 lbs. \$1.00.

The prices on oats, corn, grains and farm seed change so often, write for prices.

The yield is very large for an early variety, equal to some of the late ones, form oval and round, skin slightly netted, creamy white having eyes, which are quite shallow, some even with the surface, flesh pure white and of finest quality and very handsome appearance has brought it right to the front as a profitable variety for market or for home use. Pk. 75c; bu. \$2.25.

To ascertain the number of plants required to the acre at any given distance divide the number of square feet (43,560) in an acre by the number of square feet you desire to devote to each plant. For instance, in strawberries planted 1½ by 3 feet, each hill will occupy 4½ square feet, making 9,680 plants to the acre.

PLANTING AND PRUNING

On arrival of stock, plant at once if possible, if not remove from packing, wet down well and heel in, in mellow soil, packing dirt firmly about roots; but plant as soon as possible. Do not expose roots to sun or wind as stock so exposed is not liable to grow. Soil for planting should be well drained. Prune all bruised or broken roots with a sharp knife. Trim all the trees up to four or five branches, suitable for forming a top. Cut these branches back to within four or five buds of the body or in other words about three-fourths of the growth. Peach trees, all branches should be cut off and cut back like a cane. This is important, do not fail to cut back your trees or shrubs for best results. In planting make holes large so as not to crowd roots. Use surface soil for filling in and plant as firmly as possible, pressing down soil well with the feet. Dynamiting the holes for planting is better than digging holes with a shovel. Never put manure in the hole about the roots.
